OUT AND ABOUT WITH NOGLSTP

NOGLSTP members, friends, and supporters convened for a reception and social at the Pennsylvania Convention Center, in conjunction with the annual meeting of the American Association for the Advancement of Science over Valentine’s Day weekend. About 25 people came to the reception, including a contingent from Triangle Area Gay Scientists (TAGS), and the Humboldt Society, Philadelphia’s gay and lesbian natural history organization. Many people stopped by to say hello on their way to a simultaneously scheduled reception for The Association for Women in Science. Barbara Belmont presented a short history of NOGLSTP, and introduced NOGLSTP Board Member Mark Tumeo and NOGLSTP Web Master Arthur Lloyd to the audience.

Mike LuFurno (left photo), Program Coordinator of the Humboldt society, presented a colorful and informative slide show on the natural history of the Philadelphia area. The event was followed by a walk to a local pub for a delicious dinner and much socializing.

Gay and lesbian biologists (and their companions) from across the country met for dinner at the Fly Trap in San Francisco April 18th. The convention that drew them together was the annual Experimental Biology meeting. Dinner conversation was lively and intense, as each attendee shared and compared their expertise in neuroanatomy, physiology, immunology, and veterinary science. Nine people in all were there to enjoy the evening.

CHEMISTS MEET UP IN DALLAS

The newly and informally formed LGB-Allies Chemists group met twice for meals together at the Spring National American Chemical Society in Dallas. Originally an unmoderated mailing list for lesbian, gay, bisexual, transgendered chemists and their allies, this group is seriously considering chartering itself as a committee within the American Chemical Society. Advantages to being an official ACS Committee would be broad visibility via ACS publications, and the opportunity to apply for funding for member retention projects. No doubt, the queer chemists and their supporters will meet at the Fall National ACS Meeting in Boston. To stay in touch with activities, join their unmoderated email list: toba@psu.edu to subscribe; lgbchem@bragg.bmb.psu.edu to post
BEWARE OF LEAKY CONDOMS

A recent Los Angeles Times story reported that a local condom importer was sentenced to federal prison for trying to bribe a Food and Drug Administration official to cover up his distribution of hundreds of thousands of defective condoms. The condoms were manufactured in Malaysia by Dongkuk Techco Rubber Industries, and were sold under the brand names of Pamitex, Maxi, Black Jack, Magic, and Ginza. Nearly half a million of the condoms were shipped to stores in California, Florida, Michigan, New York, Rhode Island, Tennessee and Texas, without FDA clearance. When samples of the shipment were tested, FDA inspectors discovered that the condoms leaked. Informed of the results, the importer offered a $2000 bribe to the FDA official to cover up the fact that he already had distributed many of the condoms and to allow him to sell the rest of them.

How does the FDA decide whether a condom shipment is safe to distribute? Statistical sampling and pinhole leak testing. A typical import shipment of condoms is about one million. Customs officials automatically detain imported shipments of condoms (and latex gloves) until they are proven to be free of pinhole leaks. The importer contracts with an independent inspection agency or laboratory to randomly sample about 3000 condoms from the shipment. Then, employing what’s called a multiple sampling plan, groups of about 300 condoms are tested for pinhole leaks. Essentially, this entails fastening the open end of the condom to a filler tube. A specific volume of water is dumped into the condom through the filler tube. The business end of the tube is then inspected for pinhole leaks, evidenced by the dripping, drizzling, or spraying of water. If none of the condoms in the first round of tests leak, then the entire shipment is accepted with no further testing. If more than 8 (or so) condoms leak, then the entire shipment is rejected. If the leak count is in between these accept and reject levels, then the next round of condoms must be tested. And so on, until an unambiguous accept or reject decision can be made or all of the condoms have been tested. The actual numbers tested and accept/reject levels vary with the size of the lot, and are spelled out by the Food and Drug Administration in the Code of Federal Regulations. The FDA reviews the pinhole leak test results before allowing a shipment of condoms to be release for sale. Except in the case of flagrant scoff-laws, this certification procedure helps assure public health and safety when it come to condom use. Now aren’t you glad you know how safe safe sex can be?

LESBIAN EARS

The March 1998 issue of Proceedings of the National Academy of Science featured a paper entitled “Comparison of the auditory systems of heterosexuals and homosexuals: Click-evoked otoacoustic emissions.” Click-evoked otoacoustic emissions (CEOAEs) are echo-like wave forms that are emitted by components of the inner ear in response to a brief transient sound. Previous research has showed that CEOAEs from females are stronger than males, and CEOAEs from right ears are stronger than from left ears. Previous research has also showed that females from opposite sex twin pairs have CEOAEs more like those of males than females. This previous research suggested that there might be a relationship between auditory system development and androgen levels during prenatal development. In this paper, the study measured the CEOAEs waveform and amplitude of 237 recruited heterosexual, homosexual, and bisexual men and women in their early 20’s. The authors reported that the CEOAEs of homosexual females were different than those of heterosexual females, and that the nature of the difference is consistent with the idea that homosexual females are exposed to higher levels of androgens prenatally than are heterosexual females. No difference in CEOAEs was observed between homosexual and heterosexual males. The authors speculate that if there is an androgen-link to the prenatal development of the auditory system, then female-female twin pairs would exhibit the strongest CEOAEs, and male-male twin pairs the weakest. The research to prove or disprove this hypothesis has not yet been performed. Reprint requests for the paper should be made to Dennis McFadden, Department of Psychology, University of Texas, Austin TX 78712. email: mcfadden@psy.utexas.edu

There was much discussion on the NOGSLTP email list about whether scientists are helping or hindering queers by researching biological origins of sexual orientation. The conventional wisdom seems to be that such research is interesting for the sake of finding out the truth, but the potential use or misuse of the information is what is bothersome. NOGSLTP advocates scientific responsibility as well as scientific freedom.

NOTED ECOLOGIST COMES OUT AS TRANSEXUAL

Noted ecologist Dr. Jonathan Roughgarden, Professor of Biological Sciences at Stanford University, has - at the age of 52 - come out as transsexual and has changed his name to Joan Roughgarden. Professor Roughgarden’s research focuses on the relationship between evolutionary biology and ecology, and involves a combination of theoretical ecology and field studies. For more information and some great internet links to transgender issues, check out her web page at http://lizard.stanford.edu.
**NOGLSTP PREPARES for the YEAR 2000**

Many years ago, NOGLSTP volunteers created a means to automatically alert NOGLSTP members that their membership dues were up for renewal. This system made use of a date code, which employed the last two numbers of the renewal year, followed by the dues expiration month. In addition, special date codes were given to complimentary subscriptions to publications and organizations, which began with the numbers 99...

Oh the history!!! Back in those days, the year 1999 seemed forever away. Now that it, and the year 2000, are right around the corner, a new expiration date code system has been implemented. From now on, NOGLSTP members will have a 6-digit date code, beginning with the entire year, and ending with the expiration month. For example, if you pay your dues in May of 1998, then your expiration date code becomes 199905. 1999 for one year from now, and 05 for May - the 5th month of the year.

Some other changes were implemented. All dues paying members have been assigned a membership number. This will enable you to access future members-only web pages like phone directories or newsletters.

Complimentary subscriptions to publications and organizations now say “comp”. If your newsletter mailing label does not have a date code, or does not indicate “comp”, then it says “trial1” or “trial2”. This means that you have received your first (trial1) or second (trial2) trial newsletter to evaluate whether you want to support NOGLSTP by becoming a dues paying member. Beware! Our database automatically removes you if you don’t join after the second trial newsletter!

Don’t worry about not being able to find your date code if you already threw away your newsletter envelope. You will always get a screaming pink kick-off notice on your final newsletter. That ought to get your attention enough to fill out the renewal form, which is always a cut-out form within the body of the newsletter. In fact, there’s one just below this article. What a coincidence!

**NEWS ON THE DOMESTIC PARTNER FRONT**

**STRATUS COMPUTER, INC.**, headquartered in Marlboro MA, provided domestic Partner benefits to its US-based employees, effective April 1, 1998. The benefits are targeted for both gay and straight couples, and their children. Stratus Human Resources began their efforts at the urging of the members of Stratus’ gay/lesbian workplace support group. In August 1997, MaryAlice Bastian and Peggy Fieland (NOGLSTP member) requested Stratus add domestic partnership coverage to its list of available employee health benefits. Stratus management responded to the request without hesitation.

**PACIFIC BELL** (and Nevada Bell) announced DP benefits for management employees in May 1997 — it’s being phased in over about 18 months, with full health benefits to take effect in January 1999. In early April, the company reached early agreement with the Communications Workers of America on a new 3-year contract, which will (among other things) extend DP benefits to all non-management employees.

**SAN FRANCISCO** - Some time ago, the city of San Francisco passed an ordinance which required that companies that do business with the city must offer the same benefits to the domestic partners of its employees that it offers to married workers’ spouses. Two air transport trade groups filed suit against San Francisco last year, arguing that airlines are nationwide businesses regulated by federal law and should not be affect by local statutes. In early April, a Federal Judge upheld the landmark ordinance but exempted airlines from the regulation. In her 96-page ruling, the judge agreed with the airlines about who can regulate them but said San Francisco’s ordinance accomplishes “a legitimate local public interest, to combat discrimination on the basis of sexual orientation.” City officials were pleased with the ruling, saying that “equal benefits have now survived a significant constitutional challenge.” Airline officials were also pleased, vindicated in their position that a local ordinance could not be lawfully applied to a nationwide industry.

**IS IT TIME TO RENEW YOUR MEMBERSHIP DUES?**

Check your mailing label. If it says 199803-199806, it is time to renew your dues. If it says 199711-199802, or trial2, it is past time to renew or join, and this will be your final newsletter unless we hear from you. We need and appreciate your continued support. Please fill out the form below (and on the other side of this page), and return it with your check to NOGLSTP, PO Box 91803, Pasadena CA 91109. Remember to add $5US if you are subscribing outside of the US. Thank you. You may also use this form to inform us of any address or area code changes.

NOGLSTP Bulletin
ABOUT NOGLSTP
NATIONAL ORGANIZATION OF GAY AND LESBIAN SCIENTISTS AND TECHNICAL PROFESSIONALS, INC., is a national organization of lesbian gay scientists and technical professionals, regional and caucus groups, and others interested in technical matters and the gay and lesbian community. NOGLSTP's goals include dialog with professional organizations, providing information, improving our members' employment and professional environment, opposing homophobia and stereotypes, educating the gay, scientific and general communities, and fostering inter-city contacts among our members. National Organization of Gay and Lesbian Scientists and Technical Professionals, Inc. is a tax-exempt educational organization under IRS section 501(c)(3), incorporated in the State of California (TAX ID # 95-4358685). Membership dues are $15-25 (sliding scale) annually for non-students. Student dues are $10 annually. After the first $10, dues are tax deductible. $5 extra for memberships outside the US for the extra postage. Please, US dollars only. Written correspondence may be addressed to: NOGLSTP, PO BOX 91803, Pasadena CA 91109-9813. For more information, see our web page at http://www.noglstp.org/

Spring 1998 NOGLSTP Bulletin

MANDATORY HIV REPORTING
The Lesbian and Gay Rights Chapter ACLU April newsletter reported that two more states have sought mandatory HIV reporting. The Massachusetts Department of Public Health will require all health-care providers to report any cases of HIV infection. A number identifier system will be used to protect patient confidentiality. The Kansas Senate is considering legislation that would eliminate HIV anonymity, requiring physicians, county health departments, and social service agencies to report names to the Department of Health and Environment. This proposed change was added to legislation funding the provision of protease inhibitors to HIV and AIDS patients who otherwise couldn’t afford the drugs.

PSYCH UNIT FILLS PATIENTS WITH PRIDE
The March 23rd issue of Nursing Spectrum featured an article about the Pride Unit at the Carrier Foundation, a prestigious mental health care facility in Belle Mead, NJ. The Pride Unit is devoted to the care and treatment of gays and lesbians with psychological problems and chemical dependencies. Since most of its staff is gay or lesbian, all of the patients are able to feel that their treatments are being administered by those who know what they’re dealing with, and that being gay or lesbian is not a failing. The Pride Unit is one of 5 such units that are part of the nationwide Pride Institute. Established over ten years ago in Massachusetts, the Pride Institute specializes in treating queer folk for depression, anxiety, chemical dependency, and AIDS-related stress and grief.
